

**Amendments to the Claims**

1. (currently amended) A method of updating a user interface of a remotely connected printer, the method comprising:

scanning a representative piece of paper creating a scanned image of paper stock, wherein the image contains visual contents of the paper, to be placed in a print tray of the printer;

accessing a document management application to locate and include the scanned image in the application;

associating the scanned image with the print tray of the printer using the document management application;

updating the user interface accessible across a network to reflect the association to allow a user to preview paper stock in the print tray prior to using the paper stock to print.

2. (original) The method of claim 1 wherein the scanning is performed by a stand-alone scanner.

3. (original) The method of claim 1 wherein the document management application is SharpDesk™.

4. (original) The method of claim 1 wherein the document management application is Adobe Acrobat®.
